PROFESSIONAL SUMMARY

CompTIA CySA+ certified AI/ML & Cybersecurity Engineer specializing in SOC telemetry and cloud-native LLM orchestration. Combines analytical rigor with Agile teamwork to deploy production-grade models on AWS. Adept at Python data cleaning, complex SQL transformations, and documenting REST APIs to translate threat data into actionable intelligence and drastically reduce alert fatigue.

TECHNICAL SKILLS

- Data & SQL: SQL (Joins, Subqueries), Python (Pandas, NumPy), Data Cleaning, Databricks, Power BI.
- AI, ML & GenAI: LLM Orchestration, LangChain, RAG, XGBoost, PyTorch, scikit-learn, NLP, Chatbots.
- Security & SOC: Detection Engineering, SIEM (ELK Stack, Splunk), Incident Response, Threat Hunting.
- Cloud, Core & Engineering: AWS (EC2, S3), Docker, Git/CI-CD, REST APIs, JSON, Agile/Scrum.

PROJECTS

Secure Guard — AI-Driven Incident Response & SOC Automation github.com/secslayer/ai-soc

- Architected a telemetry pipeline (Sysmon/Winlogbeat → Logstash → Elasticsearch), normalizing 45K+ events via Python data cleaning and SQL to extract robust threat datasets for advanced analytics.
- Trained XGBoost & SVM classifiers using Pandas/NumPy for transformations, optimizing cross-validation via PCA to achieve ~85% accuracy and balanced precision across highly diverse malware datasets.
- Forecasted playbook triggers using Prophet models, performing data checks to translate statistical thresholds into clear incident response workflows, minimizing SOC triage lag during simulated attacks.

GptGram — Production-Ready Agentic AI Platform github.com/secslayer/Gptgram

- Deployed an orchestration backend on AWS; optimized REST APIs and JSON payloads for distributed Celery task queues to securely handle high-concurrency LLM inference for multi-agent reasoning.
- Engineered semantic RAG pipelines via Qdrant vector DBs, persisting conversational states into Amazon S3. Enforced strict Git/GitHub CI/CD and clean coding standards within an Agile framework.

Ggram — Collaborative Agentic AI Platform github.com/secslayer/Ggram

- Designed an agentic platform utilizing Graph Neural Networks (GNNs); utilized Git for daily updates to autonomously solve complex ML routing tasks.

NLP Chatbot & ML Pipeline PoC

- Built a lightweight chatbot utilizing scikit-learn; reduced simulated SOC false positives by ~30% through complex data transformations and ensemble predictive models.

CERTIFICATIONS

- Coursera Mathematics for ML Specialization (Imperial College London): Linear Algebra, Multivariate Calculus, PCA – [Verify Certificate](#)
- AWS Certified Generative AI Developer (AIP-C01) Prep: Completion Certificate – [View PDF](#)
- CompTIA CySA+ (Cybersecurity Analyst CS0-003) – credly.com/badges/c4a690cd-1210...
- TryHackMe SOC Analyst Certificate – assets.tryhackme.com/cert...

ACHIEVEMENTS

- Active participant in Kaggle data science challenges (currently competing in ARC Prize 2026 - ARC-AGI-3) and ACM chapters, applying ML algorithms (XGBoost, SVMs) to solve complex statistical datasets.
- Achieved high rankings in Hack The Box (HTB) and CTF competitions, demonstrating advanced offensive security skills, vulnerability analysis, and zero-day anomaly detection.

WEBINARS & WORKSHOPS

- Engaged in TryHackMe and Hack The Box (HTB) workshops focused on Detection Engineering, Incident Response, and practical implementations of the MITRE ATT&CK framework.
- Participated in applied learning webinars for GenAI/LLM orchestration, prompt testing, and Cloud/AWS deployments to bridge data science and enterprise cybersecurity.

EDUCATION

TKM Institute of Technology | B.Tech in Computer Science & Engineering Graduated: 2025 | CGPA: 7.56/10.00
